DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-8, 10-19 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kendall (US 2006/0156332 A1) in view of Ganzer et al (US Patent 5,121,430). Hereinafter referred as Kendal and Ganzer.

Regarding claims 1, 8, and 15, Kendall discloses an apparatus and method having an emergency alert function (Emergency Alert Function (305) in figure 3), comprising: tuning means for tuning signals including emergency alert signals associated with said emergency alert function (Tuner (22) in figure 2); and processing means for enabling a disabled user setting for an auxiliary information display function of said apparatus responsive to said emergency alert signals. However, Kendal fails to disclose the use of enabling a disabled apparatus. Ganzer discloses (column 11 lines 3-11) the slave unit (85) may output control signals to control the functioning of accessory devices (96) in response to an emergency.

Therefore, it would have been obvious at the time of the invention to include the use of a control function to control devices triggered by an emergency unit. This is a

10/535,124 Art Unit: 2623

useful combination because it allows devices to be turned on or off in case of an emergency.

Regarding claims 2, 12, and 16, Kendall discloses the apparatus and method of claims 1, 11, and 15, wherein said auxiliary information display function includes a closed caption display function (page 2 paragraph (0024) lines 6-7).

Regarding claims 3, 13, and 17, Kendall discloses the apparatus and method of claims 1, 11, 15, wherein said processing means further enables an alert output using said auxiliary information display function responsive to said emergency alert signals (Display (29) in figure 2).

Regarding claims 4, 14, and 18, Ganzer discloses the apparatus and method of claims 3, 13, and 17, wherein said processing means further disables said user setting for said auxiliary information display function after said alert output is enabled (Column 11 lines 3-11).

Regarding claims 5, and 19, Kendall discloses the apparatus and method of claims 1, and 15, wherein said processing means further enables display of a default screen responsive to said emergency alert signals (Video (28 in figure 2).

Regarding claims 7, 10, and 21, Kendall discloses the apparatus and method of claims 5, 8, and 19, wherein: said processing means further enables (**Processor (22) in figure 2**) an alert output using said auxiliary information display function responsive to said emergency alert signals (**Emergency Alert Funcion (303) in figure 3**); and said

10/535,124 Art Unit: 2623

alert output includes a visual message overlaid upon said default screen (column 5 lines 36-40 (Ganzer)).

Regarding claim 11, Kendall discloses the method of claim 8, further comprised of enabling a disabled user setting for an auxiliary information display function of said apparatus responsive to said emergency alert signals (Display (29) in figure 2).

3. Claims 6, 9 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kendall (US 2006/0156332 A1) in view of Ganzer et al (US Patent 5,121,430) in view of Kennedy (US 5,369,432). Hereinafter referred as Kendal, Ganzer, and Kennedy.

Regarding claims 6, 9, and 20, Kendall discloses the apparatus and method of claims 5, 8, and 19, wherein said default screen is a blue screen (page 3 paragraph (0026) line 6). Kendall fails to disclose the use of a blue screen. Kennedy discloses on (page column 7 lines 13-15) the use of a programmed blue screen on a computer.

Therefore, it would have been obvious at the time of the invention to program the screen color to a desired match. This is a useful combination because it allows the user to get a visual aid and alert in case of an emergency.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Franklin S. Andramuno whose telephone number is 571-

10/535,124

Art Unit: 2623

270-3004. The examiner can normally be reached on Mon-Thurs (7:30am - 5:00pm) alternate Fri off (EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris Kelley can be reached on (571)272-7331. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
